

## **210 solar panel size in Johannesburg South Africa**

## Overview

---

How big are solar panels in South Africa?

For residential South African homes, the average solar panel size is generally between 1.6 to 1.8 meters tall and around 1 meter wide. The physical dimensions of solar panels depend on the type of solar cell technology used.

How do I choose the right solar system size in South Africa?

Here's a simple, step-by-step way to calculate the right solar system size for your home in South Africa. The first step is to know how much electricity your household uses on average. You can find this on your monthly electricity bill, usually shown in kilowatt-hours (kWh). A small household might use around 300-500 kWh per month.

How long do solar panels last in South Africa?

Soly offers solar panels that provide long-lasting energy and up to 25-year guarantees. Get in touch with us today to make your journey with solar simple and efficient. Discover everything you need to know about solar panel sizes in South Africa.

How efficient are solar panels in South Africa?

Solar panel efficiency depends on sunlight hours in your region. South Africa is one of the sunniest countries in the world, with 4.5 to 6.5 peak sun hours per day depending on location. A typical 1 kW of solar panels can generate around 4-6 kWh per day. This means a 5 kW system will produce roughly 20-30 kWh per day, or 600-900 kWh per month.
