

A small 5G base station in Spain was out of power

Overview

Why did Spain's main transmission grid lose power before the blackout?

A spokesperson for grid operator REE said Spain's main transmission grid had no incidents on April 28 before the blackout, and the power loss "occurred due to causes outside" the grid, possibly at generation plants themselves or in smaller grids not managed by REE.

Why did Spain lose power during a blackout?

Cyberattacks, supply-demand imbalances and grid capacity issues have been ruled out as causes. A spokesperson for Spain's grid operator REE clarified that the main transmission grid was incident-free before the blackout. The power loss occurred due to causes outside the grid, suggesting potential issues at generation plants or smaller grids.

What happened to Mobile World live in Spain?

Mobile World Live Spanish operators scrambled to keep networks running after a massive power cut hit the nation yesterday (28 April), with crisis teams and backup energy sources employed to maintain and restore services.

What caused a blackout in Spain & Portugal?

REUTERS/Jon Nazca/File Photo By Pietro Lombardi MADRID (Reuters) - An abrupt loss of power generation at a substation in Granada, followed by failures seconds later in Badajoz and Seville, triggered an unprecedented blackout across Spain and Portugal on April 28, Spain's energy minister said on Wednesday.
