

AUsPAK Uninterruptible Power Supply

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

Why do you need an uninterruptible power supply?

In these sorts of scenarios, uninterruptible power supplies can offer you additional peace of mind and an extra level of safety for both your hardware and your data. What does a UPS do?

How do they protect equipment?

What different types of UPS are available in today's market?

A quick note on naming conventions.

Does 4cabling sell uninterruptable power supply products?

4Cabling sells a number of uninterruptable power supply products. The right product should support your hardware. If you don't have the right UPS for your hardware, the UPS doesn't have the capability to keep the hardware powered on. The result is your equipment loses power and users lose data.

How do I choose a ups power supply?

A UPS power supply may vary in the backup time, size, numbers and type of communication ports. Here are some factors to consider when choosing a UPS: Power Requirements (VA/Watt): The first step is to determine the power requirements of your devices. Ensure that the UPS capacity is sufficient to handle the total load.
