According to the current price of solar modules

Overview

How much does a solar module cost in 2025?

Specifically, in August 2025, the Price Index showed: about €0.055/Wp for low-cost photovoltaic modules, unchanged from July prices. “Manufacturers are moving quickly to end the devastating price war. The Chinese government is gradually phasing out tax incentives and subsidized solar module exports.

How much does a photovoltaic module cost?

Mainstream Modules: Average price of €0.11/Wp, stable compared to September but 21.4% lower than January 2024. Low-Cost Modules: Average price of €0.065/Wp, a 7.1% decrease from September and 27.8% from January 2024. These trends are exerting mounting pressure on the photovoltaic sector.

How much does a full black solar module cost?

Full black high-efficiency solar modules of up to 22.5% efficiency saw their price increase by 3.7% MoM and 7.7% since January 2025 to €0.14 (\$0.15)/W. According to pvXchange, prices for mainstream PV modules with up to 22.5% efficiency improved to €0.115 (\$0.12)/W, representing an increase of 4.5% over February and 9.5% over January 2025.

Why are solar panels so expensive in China?

An increase in domestic demand for modules in China, the world’s largest solar PV market, is causing an increase in prices. According to pvXchange, the price of panels across all power classes increased by an average of €0.5 (\$0.54)/W in March 2025.
