

Algeria s solar power generation and energy storage advantages

Overview

How much solar power does Algeria have?

Algeria had around 423 MW of solar generation capacity at the end of last year, according to the International Renewable Energy Agency. This content is protected by copyright and may not be reused.

Will Algeria build a one-gigawatt solar energy project in 2021?

Towards this end, Algeria launched a tender for a one-gigawatt solar energy project in 2021, comprised of building five power generation sites ranging from 50 to 300 MW each.

How much electricity does Algeria generate a year?

Algeria currently generates a relatively small amount of its electricity (e.g., three percent or 686 MW annually), from renewable sources, including solar (448 MW), hydro (228 MW), and wind (10 MW).

Could Algeria become a solar supply hub?

Given Algeria's location at the crossroads of Europe, the MENA region, and sub-Saharan Africa, the nation could conceivably become a manufacturing supply hub for the renewables industry. Algeria already has three solar panel facilities totaling 260 MW of annual solar panel production capacity (about 40 percent of which became operational in 2020).
