

Baghdad DC Uninterruptible Power Supply Production

Overview

What is an uninterrupted power supply (UPS) system?

Uninterruptible Power Supply (UPS) systems play a critical role in ensuring continuous and reliable power supply for various applications, particularly in scenarios where uninterrupted DC power is essential.

What is a Mitsubishi Electric uninterruptible power supply (UPS) system?

Mitsubishi Electric uninterruptible power supply (UPS) systems provide daily power conditioning as well as backup power in the event of an outage to reduce damage to manufacturing equipment and maintain uptime for your production line.

Why do you need an uninterruptible power supply system?

Uninterruptible power supply systems can reduce downtime (and its cost) in manufacturing by providing reliable backup power in an emergency. A UPS allows your systems to shut down slowly, in alignment with standard procedures, as opposed to the rapid shutoff of an outage, which could damage the equipment.

Which batteries are used in a decentralised UPS system?

Maintenance-free supercaps, long-life and safe LiFePO4 and lithium-ion battery packs, or classic lead-acid batteries are used. Our decentralised UPS systems provide effective protection against power failure, flicker, fluctuation, or voltage dips in DC power supplies.
