Overview

What happens if a switchgear arc flashes?

A switchgear arc can cause an explosion that can damage equipment, injure or kill workers, and start fires. This makes it a serious hazard in the switchgear room. To mitigate the risks associated with arc flash events, many electricians choose to install arc resistant switchgear.

How does an arc flash switchgear work?

Generally, this type of switchgear will come with flaps that open under the intense pressure of arcing energy. The flaps allow the heated gases of an arc flash and the pressure to safely vent out of the enclosure and away from the operator. When venting arc flash gases outside of the switchgear room is necessary, extra duct work is used.

What is arc-resistant switchgear?

Arc-resistant switchgear is designed to provide an additional degree of protection to personnel performing normal operating duties in close proximity to the equipment while it is operating under normal conditions.

What is aq-101 arc flash protection device?

The AQ-101 arc flash protection device is a sophisticated microprocessor-based arc flash protection unit for arc [.] AQ-101D is a sophisticated microprocessor-based arc flash protection device for arc light detection. It is designed [.] The AQ-101S arc point sensor device is a sophisticated microprocessor-based arc flash protection unit for arc [.]
