

China s solar container communication station household rooftop solar power generation

Overview

Can rooftop solar be deployed in China?

This study moves beyond technical estimates to assess the deployable rooftop solar potential across 367 Chinese cities, factoring in real-world constraints. The findings offer actionable insights to guide strategic deployment and support China's ambitious solar energy goals.

How big is China's rooftop solar system?

This was China's largest- ever first-quarter addition. Rooftop solar systems contributed around 36 GW, which is 60% of the total capacity added. This increase in rooftop installations follows new policy guidelines announced in October 2024 by the National Energy Administration (NEA). These guidelines took effect in May 2025.

Why is China doubling its rooftop solar capacity?

The country's rapid development of rooftop solar capacity is also driven by government incentives. Newly added annual installed capacity for solar stations has been around 30 GW on average over the past few years, China New Energy Investment and Financing Alliance said.

How many solar panels are installed in China?

A recent report by Rystad energy shows that most rooftop systems are being installed for commercial and industrial (C&I) use. The total installed capacity of distributed solar in China is expected to reach 130 GW by the end of the year. This will include about 92 GW from C&I projects and 38 GW from residential users.
