

# Construction of base stations of telecommunication operators

## Overview

---

What is base station operation?

These operators own many base stations, so Huawei provided the idea of "base station operation", aiming to help them rapidly build fixed networks through fixed-mobile synergy. The idea behind base station operation is to develop FBB around base stations. This construction mode can fully utilize mobile operators' large quantities of base stations.

What is a telecommunications system (radio base station)?

A telecommunications system (radio base station) may comprise an equipment room/shelter which is a structure for housing power supply and transmission equipment and/or antennae which are fixed to roof parapet of a building or attached to supporting frames projecting from the external wall of a building. 2.

What is a radio base station reconfiguration procedure?

This procedure outlines the application procedure to be followed by the mobile services operators (hereinafter called the "operators") for the reconfiguration of existing radio base stations NOT involving changes in the structural design and planning perspective of the parent building, and the change of land use.

How many base stations are there in the world?

According to Huawei's Wireless Network Market Insight statistics, global mobile operators have a total of about 6 million physical base stations. Through base station operation, these operators can deploy FTTx across the world more efficiently, meeting users' demands for diverse connections and experience.
