

IMK CONTAINERS

Cooperation on bidirectional charging of photovoltaic energy storage containers

Overview

How can bidirectional charging/discharging a battery achieve maximum PV power utilization?

In addition, with the proposed strategies, the bidirectional charging/discharging capability of the battery is able to achieve the maximum PV power utilization. All the proposed strategies can be realized by the digital signal processor without adding any additional circuit, component, and communication mechanism.

Why should a PV Charger abandon the maximum power point tracking function?

Traditionally, in order to realize these charging strategies, the PV charger should abandon the maximum power point tracking function to maintain the power flow balance. As a result, the output power of the PV array will be decreased.

What is bidirectional power flow control?

Therefore, bidirectional power flow control strategies are proposed to achieve the maximum PV power utilization as well as to realize the hybrid charging methods. In addition, with the proposed strategies, the bidirectional charging/discharging capability of the battery is able to achieve the maximum PV power utilization.

Cooperation on bidirectional charging of photovoltaic energy storage

[Pathways for Coordinated Development of Photovoltaic ...](#)

The implementation of bidirectional charging technologies further enhances the flexibility of energy distribution by allowing electric vehicles to function as temporary energy ...
