

# Data Centers Use Foldable Containers for Ultra-High Efficiency

## Overview

---

Does IBM offer Containerized data center solutions?

IBM Corp offers containerized data center solutions tailored to meet the evolving needs of modern IT infrastructure. Leveraging its expertise in cloud computing and advanced technologies, IBM provides modular, portable data center solutions that offer scalability, rapid deployment, and energy efficiency.

What are the benefits of containerized data centers?

Scalability and Flexibility – As business needs evolve, companies can add or remove containerized data centers as required. Their modular nature allows organizations to scale their IT infrastructure efficiently without extensive modifications to existing facilities. Cost-Effectiveness – They eliminate the need for costly infrastructure development.

What is a containerized data center (CDC)?

A Containerized Data Center (CDC) is a modular, portable computing facility typically housed in a standard 20-foot or 40-foot shipping container or a similar enclosure.

Are containerized data centers a cost-effective alternative to traditional expansion?

Enterprise IT Expansion – Companies experiencing rapid growth or requiring temporary data processing capabilities can deploy containerized data centers as a cost-effective alternative to traditional expansion. As technology advances, containerized data centers will continue evolving. Key trends to watch include:
