

# Egypt s solar power generation

## Overview

---

Does Egypt have a solar plan?

In 2012, the Egyptian government approved the Egyptian Solar Plan, which includes adding 3.75 GW of solar energy by 2027: -3 GW concentrating solar thermal power (CSP) and 750 MW photovoltaics (PV). The Ministry of Electricity and Renewable Energy has signed nine MOUs worth \$600 million for solar and wind projects in Egypt.

How much solar power can Egypt produce?

According to the Wind and Solar Atlas, the East and West Nile areas have the potential to produce around 32,500 MW of wind power and 54,800 MW of solar power. Egypt is also considering financing options to conduct feasibility studies for the following projects:.

How much electricity will Egypt generate by 2040?

Egypt has revised its targets upward, now aiming to generate 42 percent of electricity from renewable sources by 2030 and over 60 percent by 2040, leveraging wind, hydropower, photovoltaic solar, and emerging technologies such as green hydrogen.

How did ancient Egyptians use solar power?

But thanks to literally groundbreaking research, it's now known ancient Egyptians had access to a primitive form of solar power. Using only simple tools, they were able to use obsidian — a type of volcanic glass composed mostly of silicon — with high levels of naturally occurring boron to construct simple solar cells using hand drawn copper wire.
