

# **Ghana EK lithium iron phosphate battery pack**

## Overview

---

Are LiFePO<sub>4</sub> batteries toxic?

The materials used in LiFePO<sub>4</sub> battery packs, such as iron, phosphorus, and lithium, are relatively non - toxic compared to some of the heavy metals and toxic chemicals used in other battery chemistries.

What is a LiFePO<sub>4</sub> battery?

**2.1 The Cathode Material: LiFePO<sub>4</sub>** The cathode of a LiFePO<sub>4</sub> battery pack is composed of lithium iron phosphate, which has an olivine - type crystal structure. This structure consists of a three - dimensional framework of PO<sub>4</sub> tetrahedra and FeO<sub>6</sub> octahedra, with lithium ions (Li<sup>+</sup>) occupying interstitial sites.

What is lithium hexafluorophosphate in a LiFePO<sub>4</sub> battery pack?

The electrolyte in a LiFePO<sub>4</sub> battery pack serves as the medium for the transport of lithium ions between the anode and the cathode. It is typically composed of a lithium - containing salt dissolved in an organic solvent. Lithium hexafluorophosphate (LiPF<sub>6</sub>) is a commonly used salt in the electrolyte.

Does a LiFePO<sub>4</sub> battery pack keep a good capacity?

In cold conditions, LiFePO<sub>4</sub> battery packs generally maintain a better capacity retention compared to some other lithium - ion battery chemistries. For example, at - 20°C, a well - designed LiFePO<sub>4</sub> battery pack can still retain around 70 - 80% of its room - temperature capacity.
