# Glass greenhouse plus rooftop solar

## Overview

---

What is a greenhouse integrated PV (gipv) module?

Get in touch! Traditional greenhouses rely on external fossil fuel derived energy sources to power lighting, heating and forced cooling. Specially designed BiPV solar glass modules for greenhouses, Heliene's Greenhouse Integrated PV (GiPV) modules offer a sustainable alternative with no additional racking or support required.

Can a greenhouse be installed on a roof?

Greenhouses that are installed on roofs generally use glass materials with high energy performance and are constructed to be highly airtight; however, insulation can be used on the northern side to block cold winds in the winter and reduce the heating load, and louvers can be installed to control sunlight in the summer and reduce the cooling load.

Can a rooftop greenhouse be a smart farm?

In such cases, BIPV can be installed to generate energy while simultaneously blocking sunlight and heat. As such, rooftop greenhouse smart farms can be created so that the existing building and eco-friendly technologies are integrated, rather than creating the building and the greenhouse as independent forms.

Do rooftop greenhouses need sunlight?

Not all rooftop greenhouses are wrapped in material that allows sunlight to pass through, such as glass. In spaces where mushrooms are grown and spaces that are used by humans, such as spaces for processing crops, it is necessary to block the sunlight adequately.

## Glass greenhouse plus rooftop solar

### [Photovoltaic windows can reduce energy ...](#)

The group believes that a fully glazed solar greenhouse could offset up to 100% of the energy consumption in worldwide locations by using adaptable and efficient temperature control techniques.
