

# How many watts of solar panels are bright enough for the door

## Overview

---

### What size solar panel do I Need?

The size of the solar panel you need will depend on a few factors, including the wattage of the lights and the average amount of sunlight your location receives. A general rule of thumb is that you'll need one watt of solar power for every hour that you want to run your lights.

### How many watts of solar power do I Need?

A general rule of thumb is that you'll need one watt of solar power for every hour that you want to run your lights. So, if you want to run your lights for 8 hours per day, you'll need an 8-watt solar panel. Of course, there are other factors to consider as well, such as battery efficiency and cloud cover.

### How much electricity does a 100 watt solar panel use?

A typical 60-watt incandescent light bulb uses about 0.06 kilowatts (kW) of electricity per hour. This means that a 100-watt solar panel could theoretically power a 40 watt solar panel. However, incandescent bulbs are being phased out in favor of more efficient options like LED lights that stay on all night.

### How many solar panels do I Need?

Solar panels produce about 250 watts of power each, so you'll need between 1,120 and 1,270 watts of solar panels to completely offset your energy usage. Of course, the number of solar panels that you'll need will also depend on how much sunlight your area receives and the efficiency of your solar panel system.
