

# **How much does it cost to customize a DC inverter**

## Overview

---

How much does a solar inverter cost?

Here's an estimated replacement cost for a solar inverter: String inverters are the more affordable option for PV system owners to consider. This type of inverter operates by gathering DC from a sequence of solar panels, known as a 'string'. The solar inverter replacement cost generally ranges from R10,000 to R30,000.

How do I choose a solar inverter?

Stick with a string inverter. Lower overall cost, fewer moving parts. Match the inverter to the system size, don't overspend. Choose one with at least a 10-year warranty. Ask your solar installer to quote two or three options. If you might expand your system, size the inverter accordingly.

Which inverter is best?

1. Type of Inverter String inverters are the most affordable. Hybrid inverters cost more because they handle more functionality. Microinverters, one for each panel, have the highest cost per watt due to their quantity. 2.

How much does a micro inverter cost in South Africa?

Micro inverters, on the other hand, present a different financial and technical picture. With costs ranging from R400 to R2,000 per unit, the total solar inverter replacement cost could exceed R50,500 when installation aspects such as wiring are included, based on an average South Africa system with about 15 panels.
