How to set up solar power generation at a green solar container communication station

Overview

Can you put solar power in a shipping container?

There are many ways to skin a cat, and even more ways to add solar power to a shipping container. To be fair, I cheated a bit. Well, not really cheated, but I just went with a retail solar generator system instead of DIYing that part myself from à la carte components.

How much power does a solar panel use?

With 1,200W of theoretical power (and probably more like 900W of solid real-world Florida solar energy), that would be a decent flow rate. The panels I used are Pecron's folding panels, which aren't really meant for this type of long-term permanent installation.

How can I save money on solar panels?

To save a bit of money instead, you can source your own solar panels, solar charge converter, batteries, inverter, and wiring, then make it all play together. For me and my limited time, an offer from Pecron for a solution that would do all of that for me sounded perfect, so I went with Pecron's system.

Do you need a solar-powered off-grid charging shed?

Between my electric bikes, e-motorcycles, e-ATVs, electric tractors, and a few other things I'm probably forgetting, having a weather-sealed, solar-powered off-grid charging shed would be a big benefit.
