

# Is there a height limit for solar panels

## Overview

---

How high can a solar panel be installed?

All solar panel mounting systems will have a limit of building height - typically 10 m, but sometimes 20 m. For example, Australian company SunLock supplies a 'one size fits most' set of drawings in its installation manual, but can provide extra certification for any building height, panel size or purlin/batten material or thickness.

What is the height range of the solar panels?

The solar panels will be ground mounted on racks at an angle of 30 degrees with heights between 0.8 metres (2ft 7ins) and 2.9 metres (9 ft 6ins). This will enable the land to remain in agricultural use as grazing land.

How high should a solar system be above a ridge level roof?

The solar ordinance sets height requirements for solar systems to not extend further than three feet above the ridge level roof and cannot extend further than ten feet above surface roof.

Can a solar collector exceed a height restriction?

To view the provision see Laramie, WY, Code of Ordinances § 15.14.030 (A) (1) (2017). Seattle, WA, Municipal Code § 23.44.046 (2010) (allows solar collectors specifically to exceed height restriction by several feet and provides unique setback for solar collectors).
