Micro grid-connected inverter with wifi

Overview

What are grid-connected inverters?

Grid-connected inverters (GCI) are used to feed power from renewable energy distributed generators into the grid*. They are widely used for this purpose. Repetitive control (RC) enables such inverters to inject high quality fundamental-frequency sinusoidal currents into the grid.

What is PV solar micro inverter?

▪ **High reliability:** 6000V surge protection, PV Solar Micro Inverter features a robust IP65 waterproof rating. ▪ **MPPT:** Micro grid connected inverter can control each component in parallel independently and safely. Maximum power point tracking function, effectively tracking and locking the maximum output power of solar panels.

How do you connect a grid inverter?

Most people prefer the series connection from on-grid panels because it significantly increases the voltage received by the grid inverter. To do that, you should connect the first panel's positive terminal to the second panel's negative terminal, which connects to the third panel's positive terminal and continues the process.

How to operate a solar micro inverter remotely?

It can be operated and monitored remotely via WiFi or cell phone APP. 1. WiFi router needs to set the frequency of 2.4GHz. 2. WiFi signal must be good (it is recommended that the router be placed next to the inverter). ▪ **High reliability:** 6000V surge protection, PV Solar Micro Inverter features a robust IP65 waterproof rating.

Micro grid-connected inverter with wifi

MPPT Solar Grid-Connected Micro Inverter 300W 400W 600W 800W on Grid

MPPT Solar Grid-Connected Micro Inverter 300W 400W 600W 800W on Grid Micro Inverter Gt-400 with WiFi Cloud Monitoring US\$66.00 10-99 Pieces US\$61.00
