

# Price of explosion-proof solar panels

## Overview

---

Are ATEX solar panels explosion-proof?

Enhanced Safety Features: Standard panels do not need to be explosion-proof, meaning they lack safety features of ATEX and IECEx-certified panels. For instance, while a typical solar panel might house its electrical connections in standard junction boxes, ATEX panels use explosion-proof junction boxes.

How much do solar panels cost?

Global solar panel pricing varies wildly. Manufacturing locations dramatically affect final costs. China produces the world's cheapest solar panels at \$0.13-\$0.18/watt. Vietnam and Malaysia follow at \$0.18-\$0.22/watt. US/EU panels cost \$0.30-\$0.50/watt. Key Insight: Cheapest doesn't mean lowest quality.

What is ATEX solar panel?

The ATEX Solar Panel has a standard pole and wall mount which is easily adjustable to maximize energy production at different locations. The ATEX Solar Panel has a stainless steel construction designed for harsh and demanding outdoor environments. Remote, stand-alone power solution eliminates the need for expensive trenching and power cabling.

Are ATEX and IECEx solar panels safe?

ATEX and IECEx solar panels are a vital part of the renewable energy landscape in hazardous environments. Their specialised design ensure they can safely provide power in areas where explosive atmospheres are intermittent or frequent risk.
