

Riyadh Rural Perovskite solar Tile Purchase

Overview

What is perovskite solar?

Perovskite PV is the newest and the most exciting solar technology. It broadens possible applications of traditional photovoltaics, and it can transform the products we use every day. We deserve green, unlimited power to improve our lives. We are proud Saule Technologies can provide this with perovskite solar cells – the technology of tomorrow.

Are metal halide perovskite solar cells a promising candidate for next-generation photovoltaic technology?

Metal halide perovskite solar cells (PSCs) have attracted significant research attention in the past years and are regarded as a promising candidate for next-generation photovoltaic technology.

Do perovskite solar cells retain PCE after damp heat test?

This work, which came out in Science, demonstrates the first perovskite solar cells with 96% PCE retention after damp heat test, with PCEs 20%. This work was performed in collaboration with Ilke Celik from the South Dakota School of Mines and Technology.

Can photoluminescence reabsorption determine intrinsic recombination rate of metal-halide perovskite films?

This work was performed in collaboration with Ilke Celik from the South Dakota School of Mines and Technology. An analytical solution of photoluminescence reabsorption (PLr) is used to determine the intrinsic radiative carrier recombination rate of metal-halide perovskite films.
