

# Singapore high performance solar container battery

## Overview

---

Does Singapore need a solar energy storage system?

SINGAPORE – As Singapore seeks to harness as much sunshine as it can to maximise its limited renewable energy sources, it needs to improve technologies that can store excess solar energy from the day. One such technology is energy storage systems (ESS), which are essentially giant batteries packed in containers that store electricity for later use.

What is Singapore's solar energy system (ESS)?

Built across two sites on Jurong Island, our ESS enhances Singapore's grid resilience by mitigating the impact of solar intermittency as the republic progresses towards achieving its 2030 solar target of at least 2GWp and energy storage systems deployment of 200MWh beyond 2025.

Why should you install ESS / solar battery systems in Singapore?

This gives you greater energy control, cost savings, and reliability across any site type in Singapore. Integrating an ESS / solar battery system offers numerous advantages: Use more of the clean energy generated by your own solar panels instead of exporting it.

Can a sodium-ion battery be used for energy storage in Singapore?

Posh Electric specialises in developing ESS that run on sodium-ion batteries. With the grant, the company will study the viability of this newer type of battery for energy storage in Singapore. Sodium is 1,000 times more abundant on earth compared with lithium, which has to be mined in specific areas, such as briny water and rock ores.
