

Solar Systems in Eastern Europe

Overview

Which European countries have the most solar energy?

The age of solar energy is dawning in Eastern Europe: According to the European industry association SolarPower Europe, Poland has been one of the top ten leading countries in Europe in terms of PV deployment since 2016. Hungary has joined the list after adding 1.6 gigawatts (GW) of PV capacity in 2023, a 45 percent increase over the previous year.

Who is European Solar?

European Solar is an industry frontrunner that is constantly working on trendsetting projects. We like to be involved and in the thick of the action. Solutions in the excellent category, along with personal service. European Solar delivers reliable, sustainability solutions. We're a global partner to prominent suppliers and ambitious organizations.

Why is Eastern Europe getting more solar power?

The country's total solar power output increased dramatically, by 970 megawatts (MW) to be exact. The PV boom in Eastern Europe is driven by a desire for greater energy independence and a commitment to environmental and climate targets. Other key drivers are cost efficiency, technological advances and subsidy policies.

How many GW of solar power will Europe have in 2023?

The combined annual installation is projected to more than double between 2023 and 2027, from just above 3 GW to close to 7 GW. Both Czech Republic and Romania had previously witnessed annual additions of GW-scale solar capacity during the initial phases of the EU solar boom, occurring in 2010 and 2013, respectively.
