

Solar container outdoor power DC-in

Overview

Can you put solar power in a shipping container?

There are many ways to skin a cat, and even more ways to add solar power to a shipping container. To be fair, I cheated a bit. Well, not really cheated, but I just went with a retail solar generator system instead of DIYing that part myself from à la carte components.

How powerful is a solar power system?

With 8 kWh of stored energy and nearly 1,000W of real-world power in direct sun (and often 600-800W in less-than-ideal conditions), this is a seriously powerful system for just charging up all my EVs. This could power a tiny home or other small off-grid setup like a hunting cabin.

How much power does a solar panel use?

With 1,200W of theoretical power (and probably more like 900W of solid real-world Florida solar energy), that would be a decent flow rate. The panels I used are Pecron's folding panels, which aren't really meant for this type of long-term permanent installation.

How many solar panels can a 2x4 hold?

I used pressure-treated 2x4s to build a pair of mounts for the solar panels, each of which would hold three 200W panels. With 1,200W of theoretical power (and probably more like 900W of solid real-world Florida solar energy), that would be a decent flow rate.
