

# Solar inverter residual value

## Overview

---

What is residual value of a solar system?

As the solar industry continues to grow and mature, more and more attention is being paid to a solar system's residual value - or the value of the system at the end of a project's life.

How long do solar panels last?

Considering that solar panels generally carry performance warranties of 25 years, with production capacity that can often last well beyond that, the residual value of these systems can often be quite significant. Far too often though, solar system owners are not achieving the full potential value of their systems.

What is the financial impact of under-servicing and undermanaging solar assets?

Nautilus Solar has seen the financial impact of under-servicing and undermanaging solar assets. In addition to the short-term costs created by lagging performance or reporting headaches, there is a real impact on an owner's return on investment over the life of a solar asset.

How long does a utility-scale PV system last?

Decision tree of options for FOV at end of utility-scale PV system's useful life  
Figure assumes a useful life of 30 years, with an original financial transaction of 20 years. Specific variables, their values, and ranges represent only a subset of possible options.

## Solar inverter residual value

---

### Partially Observable Residual Reinforcement Learning for PV-Inverter

To address the limitations mentioned above, we propose a novel residual partially-observable RL (RRL) framework for the coordinated control of PV inverters. The key ...
