

Solar off-grid power generation system configuration

Overview

Does this guideline support off-grid solar installations?

This Guideline supports solar installations that are off-grid and include systems where all the energy is supplied from solar photovoltaic modules (or when a fuelled generator is used either as a back-up or daily).

How do I design an off-grid solar or battery system?

The most important part of designing any off-grid solar or battery system is calculating the daily energy requirement in kWh. For grid-connected sites, detailed load data can often be obtained directly from your electricity retailer or by using meters to measure the loads directly.

Do off-grid solar panels need maintenance?

Your off-grid solar system will require occasional maintenance and care to keep things running smoothly. Here's what we recommend: Dust and debris can settle on the face of your solar panels, which will impact the output of the system if your panels get too dirty.

What is an off-grid Solar System?

With an off-grid system, you are entirely independent of the grid and 100% responsible for your power needs. You won't be able to harness extra electricity from the utility company. Learn more about off-grid vs. grid-tie systems. Ready to add an off-grid solar system to your home?
