# Solar panel battery solution

## Overview

---

Can batteries be used in solar panels?

The solution lies in integrating batteries into photovoltaic panel installations. This approach not only enhances the advantages of this renewable energy source but also provides significant savings on energy bills and increases contributions to the energy transition. [How Does a Solar Panel Systems with Batteries Work?](#)

Are solar panels paired with a home battery energy storage system?

By Sam Wigness | Dec 4, 2025 In the last year, nearly two-thirds of solar.com customers paired their solar panels with a home battery energy storage system (aka BESS). Why?

How to match solar panels with batteries?

If you need 30 kWh daily and want 2 days of autonomy, then you need a battery with a minimum capacity of 60 kWh. Choose battery types that match your system's voltage and charging requirements to ensure compatibility. By following these steps, you can effectively match solar panels with batteries to optimize your energy system.

Why do solar panels need battery storage?

Solar panels generate electricity only when the sun is shining, which means that without storage, excess energy generated during the day goes unused or is sent back to the grid. Solar battery storage systems allow users to retain this excess energy and utilize it when needed, improving overall energy efficiency and reliability.
