

Solar panel home installation details

Overview

How long does a solar panel installation take?

A typical solar panel installation for a home takes one to three days, depending on the system's size and complexity. Your complete DIY solar installation guide! Learn how to set up panels, connect inverters, and power your home with clean, renewable solar energy.

How to install solar panels?

The first step in solar panel installation is fixing the mounting structure to support the panels. The whole mounting structure must be tilted and have an angle between 15 to 20 degrees to have maximum sunlight exposure. For countries in the Northern Hemisphere, the best direction to face solar panels is south because it gets maximum sunlight.

How does a solar installation process work?

Our operations team will handle the delivery and setup of all the equipment specific to your installation agreement. Typically, this process involves mounting the solar panels, setting up the inverters, and wiring the system to your home's electrical panel, including connecting any batteries to the main service panel or subpanels as needed.

How do you install a solar racking system?

Installers add landscaping pavers or concrete blocks to the bottom of the system's frame to hold the frame and top solar panels in place. You can adjust the panels on this racking system between 5 and 30 degrees, depending on the type of panel and the manufacturer. You also have the option to install a dual-orientation (east and west) system.
