

# Solar power generation reaches 2 kilowatts

## Overview

---

How many kilowatts a year does solar power generate?

Among this, wind and solar power generation totaled 1.83 trillion kilowatt-hours, a growth of 27%. Installed capacity of PV 278 million kilowatts In 2024, the newly added PV installed capacity was 278 million kilowatts, reflecting a year-on-year increase of 28%.

How many kilowatts is PV power generation?

By December 2024, the total PV power generation installed capacity reached 886 million kilowatts, a year-on-year increase of 45% increase, with centralized PV power generation accounting for 511 million kilowatts and distributed power generation for 375 million kilowatts. PV power generation 834.1 billion kilowatt-hours In 2024.

What percentage of solar power is installed?

Installed solar power generation saw the most significant growth, with its capacity standing at about 890 million kilowatts as of the end of 2024, up 45.2 percent year-on-year, accounting for 27 percent of the national installed capacity, official data showed.

How many kilowatts are there in 2024?

By the end of 2024, the cumulative installed capacity of the country's renewable energy reached 1.889 billion kilowatts, a 25 percent increase from the previous year. Hydropower accounted for 436 million kilowatts, wind power for 521 million kilowatts, solar power for 887 million kilowatts, and biomass power for 46 million kilowatts.

## Solar power generation reaches 2 kilowatts
