South Africa Johannesburg wind power and solar energy storage project

Overview

Where will the battery energy storage project be implemented?

The Project will be implemented at approximately 17 sites, located within or adjacent to existing distribution substations of Eskom, across four provinces of South Africa. The Battery Energy Storage Project (Project) provides a solution to address both challenges.

Can South Africa halve the cost of solar and wind energy?

In answer, South Africa has launched a series of trailblazing green projects designed to tap its abundance of renewable energy sources, including the first concentrated solar power plants in Africa, and a fiercely competitive procurement program that has helped to halve the cost of solar and wind energy in just three years.

What will South Africa's oasis projects deliver?

South Africa's Oasis projects will deliver 257 MW battery storage, enhancing grid stability and driving renewable energy innovation.

Will solar batteries help South Africa's energy grid?

South Africa's state-owned utility Eskom anticipates that these projects will showcase the effectiveness of batteries in facilitating the integration of renewable energy into the country's energy mix, while simultaneously easing the strain on the national electricity grid.
