Southern Europe household energy storage solar container lithium battery

Overview

How can European policymakers help the battery storage sector?

Recommendations: How can European policymakers help the battery storage sector? Battery storage systems are essential for strengthening the EU's energy security and competitiveness by enhancing flexibility, providing ancillary services to secure the grid, maximising the use of renewable energy, and effectively dealing with energy price volatility.

Why are European households turning to solar & battery storage systems?

Number of European households turned to solar PV and battery storage systems. This shift also aligned with efforts to lower carbon emissions. However, demand for residential solar and storage quickly outpaced supply, hampered by a widespread shortage of qualified installers.

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record-breaking installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

Which countries are leading the battery storage market in 2024?

Germany, France, and the United Kingdom continue to lead the market and deliver almost 70% of the annual capacity. In 2024, Europe's top three battery storage markets – Germany, Italy, UK – solidified their dominance, with Austria and Sweden closing the 'top 5' ranking (see Fig. 2). 2024 marked the first year when reac
