

St George Solar Monitoring Equipment System

Overview

What is a solar monitoring system?

Solar monitoring systems provide a real-time snapshot of solar energy production data from your home solar system. A good monitoring system can tell you when one or more panels (aka “modules”) isn’t producing as much energy as others, or whether there’s some sort of electrical fault causing you to miss out on precious kilowatt-hours (kWh).

How does the sense solar energy monitor work?

The Sense monitoring system also records excess power sent to the grid from your solar panels, so that over time you can get an accurate record of renewable energy production, consumption, and grid export. For folks without a monitoring setup, adding the Sense Solar energy monitor is relatively easy.

Which solar installers offer monitoring software?

There are a few nationwide solar installers that offer monitoring software, but these are mostly re-skinned versions of equipment manufacturer offerings. Other nationwide installers offer web portals with day-after data, but no real-time monitoring. The one that stands apart from the others is Tesla.

How does the sense Energy Monitor app work?

The Sense energy monitor app shows solar production compared to energy being used by your appliances. The Sense monitoring system also records excess power sent to the grid from your solar panels, so that over time you can get an accurate record of renewable energy production, consumption, and grid export.

St George Solar Monitoring Equipment System

Flare SRM System

NRG Systems works with a network of solar professionals to offer a turnkey experience for solar developers. This includes support with the design, manufacture, shipping, installation, and operation of solar resource ...
