### [Steel , Composition, Properties, Types, Grades, & Facts](#)

Steel, alloy of iron and carbon in which the carbon content ranges up to 2 percent (with a higher carbon content, the material is defined as cast iron). By far the most widely used ...

[Learn More](#)

## Steel

Steel - Alloying, Properties, Uses: Alloying elements are added to steels in order to improve specific properties such as strength, wear, and corrosion resistance. Although ...

[Learn More](#)

## Steel

Steel - Construction, Automotive, Tools: The many applications of steel demonstrate best the great versatility of this material. Most often, steel consumers' needs are met by ...

[Learn More](#)

## Materials science

Materials science - Alloy, Properties, Manufacturing: While the goal of the aluminum and plastics industries is to achieve vehicle weight reductions by substituting their products for ...
