

# Taipei Power Grid Energy Storage Device

## Overview

---

What is Taipower's new energy storage system?

The new energy storage system adds power for renewable energy! In response to international energy transitions and net-zero emission trends, Taipower is actively developing diverse energy solutions.

Will Taipower build a grid-side energy storage system in 2025?

In order to stabilize RE output, Taipower plans to build 1000 MW of grid-side energy storage in 2025, including 160 MW in self-built power-type battery energy storage systems as well as 340 MW in power applications and 500 MW in composite applications purchased from private energy storage companies through Taipower's power trading platform.

How can Taipower improve grid resilience?

To strengthen grid resilience, Taipower previously implemented a 20-MW energy storage system at the Tainan Salt Fields Solar Farm and the Kaohsiung Luyuan Substation, as well as a 60-MW energy storage system at the Longtan Extra-High Voltage (EHV) Substation earlier this year.

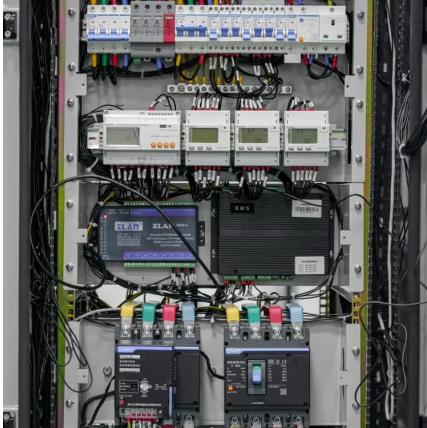

Which energy storage system in Taiwan can measure system inertia?

Furthermore, Taipower has introduced Function of Periodic Power Modulation (FPPM) technology at the Dongshan energy storage system, making it the only energy storage system in Taiwan capable of measuring system inertia.
