

Tajikistan Energy Storage Grid Connection Project

Overview

How can Tajikistan improve its energy system resilience?

Tajikistan seeks to enhance its energy system resilience by reconnecting to the United Energy System of Central Asia. This effort is supported by large infrastructure projects of common interests, such as CASA-1000 and the Rogun Hydropower Plant Project.

Can Tajikistan's solar power be harnessed to meet energy-policy goals?

In addition to hydropower, Tajikistan's significant solar power potential could be harnessed to meet several energy-policy goals simultaneously, and the government has recently set a target for renewable energy to provide 10% of generating capacity by 2030.

What is Tajikistan's hydropower potential?

Tajikistan's hydropower potential is estimated at 527 billion kWh per year, which exceeds the existing electricity consumption of the countries of Central Asia by 300%. The country's largest project is the Roghun Dam Hydropower Plant project, which when completed is estimated to produce 3600 Megawatts of energy.

How will electricity exports benefit Tajikistan?

Profits from electricity exports will contribute to the financial recovery of the Tajik national power utility company, allowing Tajikistan's electrical utilities to reconstruct existing power infrastructure and attract financing for construction of new generation and transmission infrastructure.
