

Tallinn Solar

Overview

How much solar power does Tallinn produce a day?

Tallinn, Harjumaa, Estonia (latitude: 59.433, longitude: 24.7323) offers varying potential for solar power generation throughout the year. The average energy production per day per kW of installed solar capacity in each season is as follows: 5.99 kWh/day in Summer, 1.54 kWh/day in Autumn, 0.50 kWh/day in Winter, and 3.97 kWh/day in Spring.

How to optimize solar generation in Tallinn Estonia?

Assuming you can modify the tilt angle of your solar PV panels throughout the year, you can optimize your solar generation in Tallinn, Estonia as follows: In Summer, set the angle of your panels to 42° facing South. In Autumn, tilt panels to 61° facing South for maximum generation.

What angle should solar panels be installed in Tallinn?

To optimize the efficiency of a solar PV system installed here, it is recommended that panels be tilted at an angle of 49 degrees facing South. However, Tallinn's position within the Northern Temperate Zone presents some challenges for consistent solar power generation throughout the year.

Are there incentives for businesses to install solar energy in Estonia?

Yes, there are incentives for businesses wanting to install solar energy in Estonia. The Estonian government offers a range of financial support and tax incentives for businesses that invest in renewable energy sources such as solar power. These include grants, loans, and tax deductions.
