

Transformer breaker for sale in Sweden

Overview

What is a protection transformer?

Protection transformer is a transformer intended to feed a SELV or PELV circuit. A SELV circuit means a small voltage from a protective power source, where the circuit is separated from both other circuits and earth. A PELV circuit means a small voltage from a protective power source, where the circuit is separated from other circuits.

How long does a transformer last?

A transformer, adapted specifically for industry and utilities, has an estimated lifespan of 30-40 years. It is likely to last even longer. It is therefore important that you invest in a transformer that meets tomorrow's requirements now.

What is a measurement transformer?

A transformer in which the primary and secondary windings are galvanically separated by double or reinforced insulation. A measurement transformer, also known as an instrument transformer, is an electrical device used to measure high voltages or currents and convert them to a proportional and manageable level for monitoring and measurement.

What are Tramo ETV Transformers?

TRAMO ETV's transformers are always manufactured and delivered ready for direct installation and use. All our transformers are built according to SS-EN IEC 60076-11. We use the following product names: OFS/OFL, VF/GF, TOFS/TOFL, TVF/TGF, FTPK/TFTPK, OFB, OFU, OFK. Read more about the different types below:
