

Tskhinvali Folding Container High-Pressure Type

Overview

What is the difference between TK and ISO tank?

TK containers, also known as Liquid Containers, are designed to ship liquids like food, medicine, chemicals, and other liquid goods. They have a fixed liquid tank in a metal frame. ISO tanks, on the other hand, are stainless steel pressure containers installed in a fastened external frame.

What is a folding container?

A folding container is a resin-made box that can be compactly folded when not in use. Folding reduces the size to about 1/3 to 1/4, so can be stored compactly during storage and transportation. In addition, containers can be folded and assembled easily and quickly, and can be stacked in both folded and assembled states.

Are monoflo containers collapsible?

Compatible with our straight wall containers for manufacturing and AIAG pallet systems, Monoflo's collapsible containers are designed to accommodate a variety of applications. With knock-down ratios as high as 5:1, collapsible functionality provides significant savings on inbound freight.

What is a platform container?

A platform container is a type of container that resembles a railway flatcar. It has a floor with a high bearing capacity, without a superstructure, and is suitable for overweight (up to 40 tons) and super long cargo (LxWxH: 6x4x4.5m). 80 tons of cargo can fit in a 2-connected platform container.
