

Uninterruptible power supply for storage and distribution stations

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supplies (UPS) In the event of short-term power outages, WAGO's Uninterruptible Power Supplies (UPS) bridge instabilities and keep your system running safely. For longer outages, critical processes can be safely maintained using our UPS solutions to prevent unwanted impacts and data loss.

Do uninterruptible power supply systems provide protection?

"Uninterruptible power supply systems provide protection." IEEE Industrial Electronics Magazine 1, no. 1 (2007): 28-38. Rahmat, M., S. Jovanovic, and K. L. Lo. "Reliability and availability modelling of uninterruptible power supply systems using Monte-Carlo simulation."

What are the requirements for power supplies and ups in critical infrastructures?

Specific requirements for power supplies and UPS systems in critical infrastructures concern reliability, robustness, and security: UPS systems ensure an uninterrupted power supply during power outages and enable an orderly shutdown of systems during prolonged outages.

Why do energy supply companies use DC UPS systems?

Energy supply companies use DC UPS systems in combination with remote control technology to protect the control systems of their power plants and to ensure the integration of renewable energies through transfer stations and distribution networks such as local secondary substations.
