

Vietnam Ho Chi Minh Wind and Solar Power

Overview

How has Vietnam benefited from solar & wind power development?

Vietnam has orchestrated the first stage of its solar and wind power development using FITs and a supportive overall investment environment. Government incentives and enabling policies that have boosted energy availability while avoiding upward pressure on electricity prices have gained public support.

Does Vietnam need solar power?

Solar is being integrated directly into Vietnam's export competitiveness, not just its electricity grid. Vietnam holds one of the region's largest offshore wind potentials, and it's leveraging this not just for energy needs, but for geopolitical influence.

Does Vietnam have wind power?

While solar PV has seen the greatest expansion in Vietnam, installed wind power capacity has also grown quickly. Installed wind power capacity reached 600 MW by the end of 2020, behind only Thailand (1507 MW) among the ASEAN countries.

Why is Vietnam a good place to invest in solar and wind power?

Vietnam has led the uptake of solar and wind power capacity in ASEAN since 2019. Government commitment and public support are found to be key drivers. Feed-in tariffs can strongly incentivize industry take-off. Policy certainty and preparation of transmission systems are important.
