## Overview

---

Why is the Middle East a poor country?

While the Middle East is rich in oil and gas reserves, countries in the region have a varied record in delivering power to their citizens. Due to economic and demographic problems in certain countries the grid supply fails to reach many, especially the poorer communities in rural areas.

Why is electricity so important in developing countries?

But it is still growing rapidly in many emerging market and developing countries, especially those where a significant fraction of the population still lacks access to electricity. Electricity is primarily used for heating, cooling, lighting, cooking and to power devices, appliances and industrial equipment.

What is electricity used for?

Electricity is primarily used for heating, cooling, lighting, cooking and to power devices, appliances and industrial equipment. Further electrification of end-uses, especially transportation, in conjunction with the decarbonisation of electricity generation, is an important pillar of clean energy transitions.
