

# What does upc mean Uninterruptible Power Supply

## Overview

---

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is defined as a piece of electrical equipment which can be used as an immediate power source to the connected load when there is a failure in the main input power source. In a UPS, the energy is generally stored in flywheels, batteries, or super capacitors.

What is uninterruptible power supply classification?

Uninterruptible power supply classification According to the working principle, it is divided into: backup, online, online interactive. Backup UPS: When the mains is normal, the mains directly supplies power to loads. The UPS starts the inverter only when the mains is abnormal.

What is a ups & how does it work?

What Is a UPS?

A UPS, or an uninterruptible power supply system, is an electrical device designed to provide emergency power to a load when the input power source fails. Not to be confused with an auxiliary or emergency power system, a UPS provides near instantaneous protection from input power outages via battery power [source: USAID].

What are the components of uninterruptible power supply?

The basic components of uninterruptible power supply: Battery pack: provides backup power to the UPS. When the mains power fails, the battery pack can supply power to the load. Charger: When the mains is normal, the charger charges the battery pack. Inverter: Converts direct current (DC) to alternating current (AC) to power the load.
