

# **Which platform has more stations for battery swap cabinets**

## Overview

---

What is a battery swapping station?

Aulton's battery swapping stations are designed to facilitate quick and easy battery exchanges for electric scooters and bikes. The company has developed advanced automation systems for managing battery inventory, charging, and maintenance. Aulton's technology focuses on enhancing the user experience and operational efficiency of swapping stations.

Why should EV users choose a battery swapping station?

Users can find a station more easily, reducing the anxiety regarding the scarcity of swapping stations that is often experienced by many EV users. This, in turn, enhances the attractiveness of the battery swapping service, leading to increased customer satisfaction and higher utility for the customer.

Which EV manufacturers offer battery swapping services?

Not only are EV manufacturers like NIO deploying different-generation stations, but battery suppliers such as CATL are also providing battery swapping services (i.e., CATL's EVOGO battery swap station is designed to be compatible with 80% of future EVs).

What are the optimal deployment and pricing strategies for battery swapping services?

This study explores optimal deployment and pricing strategies for battery swapping services. Deploying current (next)-generation stations drives momentum for next (current)-generation ones. Faster service speed at next-generation stations may drive immediate expansion of current-generation ones.
