Zero electricity bill home solar lights

Overview

What is a zero Bill home?

New homes in the UK have to meet Part L standards, which means they need to be built to be more energy-efficient. But Zero Bills homes go further, combining solar panels, batteries, and heat pumps with smart energy tariffs to create homes that don't just use less energy—they create and store their own.

Could a future without energy bills be a reality?

Homes equipped with solar panels and battery storage systems, such as those in the Zero Bills initiative, generate and store their own renewable energy. This reduces reliance on the grid, especially during high-demand times. Although a future without energy bills might seem ambitious, it's already becoming a reality.

What if I don't have a zero bills home?

Even if you don't have a Zero Bills home, your EV can help you save money and support the grid. With our Power Pack Bundle, you get a V2G-enabled BYD Dolphin that automatically charges when electricity is cheapest and greenest, and even feeds energy back to the grid when demand peaks. This turns your EV into an extra energy asset.

Can Octopus Energy build a zero Bill home?

And we've got the tech, the partners, and the ambition to get it done. Octopus Energy is building 100,000 Zero Bills Homes by 2030. These smart homes use solar panels, storage, and smart tech to generate free energy, helping homeowners live without energy bills for at least 10 years, guaranteed.
